GL1800C Valkyrie 2014

- The goal for the F6C's engine was to produce a rush of acceleration at a split-second's notice from a standing start. It also needed to provide epic, unforgettable drive from low rpm in top gear and offer up super-smooth throttle response everywhere in the rev-range.
- Honda's 1,832 cc horizontally opposed SOHC 12-valve six-cylinder unit has a real head start in the power delivery department. Fed by PGM-FI controlled fuel-injection with twin 40mm Keihin throttle bodies, it employs an F6C-specific 6.6-litre airbox and panel-type air filter. Bore and stroke is set at 74 mm x 71 mm, with compression ratio of 9.8:1.
- A new aluminum subframe lowers the F6C's tail. Easy ground reach – seat height is just 734 mm – and a comfortable, carefully shaped seat that's just 300 mm wide at the critical portion aids rider confidence at standstill.
- The brake system features twin 310 mm floating front discs and opposed four-piston calipers, plus a rear 316 mm ventilated disc/three piston caliper with 2-channel ABS for safe stopping in slippery conditions.
