

Features & Benefits

POLY HOPPERS - Poly seed boxes provide consistent gravity feed to Air-Pro® Meters. Designed for row spacing down to 8" twin row. Each has 1.6 bu. capacity.

POSITIVE AIR SYSTEM - The 6" hydraulic fan provides positive air pressure to meter seeds without worry of air leaks.

ROW MARKER(S) - Optional hydraulic row markers are built tough and feature a scalloped disk.

They say good things often come in small packages, and that is certainly the case with the 4-, 6-, and 8-Row Yield-Pro® Planters from Great Plains. Believing it was time to provide smaller farmers access to the yield-increasing technologies offered in our larger planters, our engineers designed three models around the Air-Pro® Metering System, giving these compact planters a new level of spacing and seed placement accuracy.*

For added versatility, the 4-, 6-, and 8-Row Yield-Pro Planters can be configured with either standard single rows or our innovative Twin-Row design on 30", 36", 38", or 40" spacing. Plus, all models are available in either a 3-point mounted or pull-type configuration.

Like their larger Yield-Pro counterparts, the 4-, 6-, and 8-row models each utilize the 25 Series Row Unit for greater accuracy, longer life, and easier maintenance than most competitive row units. Not only does the unit come with a broad selection of clear seed discs to handle a variety of different seeds, but customers also have a choice of press wheels to match every operation and planting style. A hydraulic fan provides positive air to the Air-Pro® Meters for exceptional accuracy. Four-inch manifolds and proportional metering rings ensure the same pressure to each row unit without the worry of air leaks.
