

# WALKER MOWERS

*out front mowing*

## Side Discharge Configuration

All GHS Models are available in the Side Discharge Configuration

### Side Discharge (SD)

In place of the GHS (Grass Handling System) configuration that uses an internal blower and center discharge for collection, each model can be ordered in a Side Discharge (SD) configuration (popular for non-collection applications including mulching). Side Discharge machines are compatible with a variety of side discharge and mulching decks and can also use Walker attachments.

#### Compatible Decks

Configuration	Available Sizes
Side Discharge (SD)	36", 42", 48", 52", 54", 56", 62", 74"
Mulching (ML)	36", 42", 48", 52"

\* Lower horsepower tractors may not perform well in certain conditions with this deck

\*\* Kit P/N 8691 converts 52" side discharge deck to mulching configuration

#### Popular Implements/Attachments

- Perfaerator™
- Rotary Broom
- Coulter Blade Edger
- 42" Snowblower
- 36" Snowblower
