SIDE DUMP

Demco Side Dump trailers have the lowest center of gravity in the industry. The bottom of the tub actually sits inside and below the top of the chassis frame rails. This allows for increased stability when hauling as the weight of the load is closer to the ground than those whose dump bodies sit entirely above the chassis frame rails. The low center of gravity reduces the risk of tipping over the trailer during the dump cycle without sacrificing proper dump angle; and creates a lower loading height.

Innovative design is one of the hallmarks of the Demco Side Dump's success within the side dump marketplace. Many of these features are exclusive to Demco Side Dump Trailers. They are intended to reduce total cost of ownership by decreasing maintenance, increasing durability, and enhancing resale value.
