BROOMS

It's a mean, lean, cleaning machine.

60" Broom

Cleaning, raking, lawn dethatching, snow sweeping, it does it all. Groom lawns, clean barns, sweep ice rinks and bike trails, parking lots, sidewalks, driveways, the possibilities are endless. For home owners, farmers, business owners, city workers, and more. Fully self-contained. Comes equipped with a 7HP engine and the universal mounting.

You will be able to keep your property looking its best while having fun driving around on your four wheeler or side by side. Supported by its own set of wheels which are located at the back so you may sweep close to curbs or buildings. However when grooming lawns, there is an option available which allows you to remove those wheels and place them at each end of the broom. Using this side wheel support kit to place the wheels there will allow the broom to float over the uneven terrain without damaging the lawn.

Hooks up in less than 4 minutes. The control box is at your fingertips. You may angle the broom electrically by simply flipping a switch. You also have an emergency shut-down switch for safety purposes.

66" Broom

Can be used for big jobs like cleaning up on construction sites. Because of its size, you can get into those tight areas that need to be cleaned and get the job done quickly. Use it to sweep the snow off the site to be able to continue the construction. Can also be used for all the various jobs mentioned for the 60" broom.

Hooks up in less than 4 minutes. The control box is at your fingertips. You may angle the broom electrically by simply flipping a switch. You also have an emergency shut-down switch to stop the broom whenever needed. Powered by a "Honda" brand 11HP engine for durability, dependability and efficiency. Same side wheel support kit described for the 60" broom is available.

POWERED by HONDA

TILLER

With this tiller you can have the garden of your dreams.

50" Tiller

It's mounted to the front of the ATV or UTV but you till while you back up. The reverse speed is perfect for getting a proper tilling job done. Imagine the time you will be saving as compared to walking behind a tiller and getting those unwanted sore muscles from doing so.

Fingertip Controls: Use the winch on the vehicle to raise or lower the tiller and also to adjust the depth at which you wish to till. Comes complete with a "Honda" brand 9HP engine for all the power you need. The control box will enable you to activate the tiller and an emergency shut-down switch to stop the tiller quickly when needed.

Fit most major brands of ATVs or UTVs.

Why walk when you can ride!

While you are having fun with your ATV or UTV you can also do your snow removal yourself. It's another good reason to hop on your vehicle and this time it'll be working for you.

for ATV Prestige 54"

This model will allow you to control both the motor and the snowblower from the comfort of your seat. Comes with a saddle which has all the controls: throttle, choke, chute & deflector control and kill switch. Powered by a 23HP "Kohler" engine. Snow drift cutters are installed. Light included for night time use. Now has an electromagnetic clutch for instantaneous engagement. Top of the line accessory.

for ATV or UTV Versatile Plus 48" or 54"

This snowblower comes with or without an engine. Choose from the factory installed "Kohler" or Honda engines or install your own between 13 and 24HP. Controls for the snowblower are incorporated in a handy control box which may be installed at your fingertips. Motors are centrally located behind the snowblower and are equipped with an electromagnetic clutch for instantaneous start. The chains which are used to attach the snowblower to the front of the vehicle may be adjusted to transfer some of the weight to the vehicle to assist in getting better traction or to avoid the snowblower from digging into the unfrozen ground.

for UTV Vantage 66" or 72"

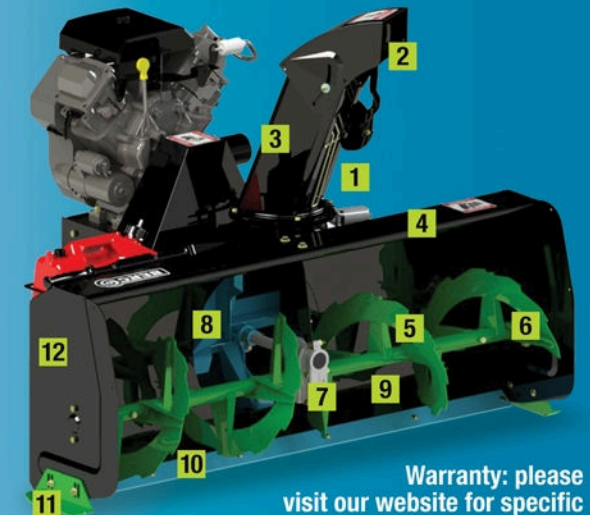

Available with a choice of engines: 23HP or 27HP "Kohler" or 24HP "Honda". A small control box will be wired into the cab right by the driver. After having started the motor, take a seat and have fun. This snowblower is a perfect match to any type of side by side vehicle. Now has an electromagnetic clutch for instantaneous engagement.

Hooks on or off in less than 4 minutes

POWERED BY
KOHLER ENGINES

FEATURE	DESCRIPTION	BENEFIT
1. ELECTRIC CONTROLS	Adjust chute & deflector. ON/OFF switch.	Control box is located at your fingertips. User friendly joystick control to adjust the deflector and turn the chute. Complete & safe control of the snowblower from the comfort of the driver's seat.
2. SPOUT	Adjustable using a joystick. Steel fabrication.	To adjust the height at which you wish to project the snow. Raising it high will throw the snow further. Easily adjusted using the joystick.
3. CHUTE	Mounted on an anti-friction ring for easy rotation of 210°. Steel fabrication.	Turn the chute using the joystick to project the snow exactly where you wish to throw it. Berco opted for steel vs plastic because it is obviously sturdier.
4. HOUSING	12 & 16 gauge steel.	Sturdy steel construction for a long hard working life span.
5. AUGER	Saw tooth serration made of 10 gauge steel.	This saw tooth auger can slice through and break up the snow much easier than the standard auger. Just think of a steak knife as compared to a butter knife.
6. BUSHINGS / BEARINGS	All rotating parts are mounted on bushings and bearings.	To facilitate replacement when needed. For a Berco product, user friendly not only means when you are using it but also when you need to repair it.
7. GEAR BOX	Heavy duty, no maintenance.	Requires no maintenance.
8. IMPELLER	Turns at a high RPM.	The blades turning at a high speed throws the snow to a further distance. Just think of a regular house fan, the faster it turns the more air is projected.
9. BASE	Double layered.	This double reinforcement protects the snowblower from possible damage when you accidentally hit a curb or other obstacles. Double the steel is actually more than double the strength.
10. SCRAPER BAR	Carbon steel, reversible & replaceable.	This scraper is another added protection to the base of the snowblower. Once this bar has worn down, simply unbolt it, flip it over and get a double life span.
11. SKID SHOES	Adjustable & replaceable.	By lowering the skid shoes the base of the snowblower is lifted off the ground to avoid picking up gravel. It also helps avoid digging into the unfrozen ground at the beginning & end of winter.
12. PAINT	Powder coating.	This is one of the best paints available for rugged outdoor uses. It is baked on for a long rust free life.
