

**FOLD HINGE** – Super heavy, greaseable wing pivot joints and frame pivots for longer lasting wear at the 1-1/2" pivot pins.

**TRANSPORT TIRES** – Extra heavy 8-bolt transport hubs and wheels. Six-bolt wing hubs and wheel with bolt in spindles for more tire stability and reliability.

**TONGUE** – Adjustable hitch heights. Tongue or clevis hitch help maintain level profile and optimal hitch height.

**FORGE HARDENED** – Six-inch spike teeth on 9" spacing for longer lasting wear.

The Great Plains Heavy-Duty Flex Harrow is the toughest finishing tool on the market! We use a triangle design with a full-length tongue, height-adjustable hitch, and doubled-up bridge frame for rigidity. The center frame is all 1/4" wall steel, making it perfect for nearly any terrain. The wings are constructed of 6" square tubing with reinforced corners. For longer life and wear, our 1-1/2" pivot pins are featured on the main pivot and wing corners. Extra-large cylinders with single valve control provide

lifting and folding power – even in heavy residue. Cable lift is automatic – no need to get off the tractor to adjust. The main hubs are 8-bolt, 4500# with 12.5Lx15 transport tires. Wing tires are 22-ply no-puncture aircraft tires for longer stability and reliability. Available as a 16 bar, 12 bar, or 8 bar.

When looking for the ideal "clod busting" finishing tool, the Great Plains HD Flex Harrow is the perfect finisher. Its pulling strength and simplicity are unmatched!
