CONVENTIONAL AUGER

8" and 10" Auger Mover - CX Series

The New CX Series of Conventional Auger Movers from Farm King incorporate many changes aimed at improving the function of your CX series auger. Available for the 8" and 10" CX auger lineup, the completely redesigned mover incorporates power steering, hydraulic scissor lift for the intake, sport tread tires, hydraulic winch for auger height adjustment, improved engine mount and leveling systems and longer reach on the intake tube. Many parts have been standardized across the models and the kit is designed for ease of assembly, ease of operation and high maneuverability.

Mover Controls

The auger mover controls are located near the engine controls, allowing the operator to control auger functions from one location. The belt guarding doubles as the engine leveling device, which keeps the belts at the same tension in any auger position.

Caster Wheel

The unique caster wheel design and independently powered drive wheels allow an extremely short turn radius. The scissor lift for the intake end of the auger allows a wide range of vehicle motion and tucks up under the auger tube for easy transport.

Engine Mount

The engine mount plate has been redesigned with no moving parts for ease of set up. The engine drive sheave is now standard equipment. The drive belts are engaged via a newly designed lever accessible from the auger and engine control location.
