

BALE KNIFE

BALE KNIFE

The Loader Mounted Hydraulic Bale Slicer Attachment

**Taking a Slice
WAS NEVER THIS EASY.**

Cuts from THE BOTTOM UP.

A Clean Cut. Everytime.

Cut the time it takes to feed high quality silage with the HLA Bale Knife.

With the increasing demand for high nutrient silage, wrapped bales have found their place in many farm yards. Feeding silage bales requires removal of both the plastic film and net wrap. Removing these coverings can cause bales to fall apart and make for clumsy handling of nutrient rich feed. Designed specifically for feeding round bales, the HLA Bale Knife rolls a lot of functionality into a single unit saving time and effort.

To prevent the wrap and netting from falling into the feeder or mixer, the proprietary system grabs the wrap and bale netting holding it securely, as the bale is sliced with the powerful serrated blade and drops free. The grabber is automatically engaged when the knife is activated through a single hydraulic auxiliary ensuring you have a tight grip before you finish slicing. The upward slicing design allows for bales to be sliced not only

into feeders and mixers, but also a mere 6" above the ground, making it ideal for operation in tight areas with little overhead space.

The integrated Kverneland tines allow you to spear or scoop the bale and hold it in place with the knife to safely move it across the yard, making the HLA Bale Knife an all in one solution for bale handling.

Model	Description	Bale Size
BK48	4' Bale Knife	4'
BK60	5' Bale Knife	5'
BK72	6' Bale Knife	6'

BALE KNIFE

Proprietary Grabber

Located at the top of the Bale Knife is the proprietary grabber that hydraulically holds onto the wrap and netting so when the knife slices upwards into the bale, the hay falls down and away, separating the wrap and netting from the feed.

Single Hydraulic Valve

Sharing a single hydraulic valve, both the pincher and cutting arm operate at the same time ensuring you have a tight grip on your bale before you start slicing.

The new bolt-on knives allow for easy replacement of a single knife without needing to replace the entire row.

Integrated Kverneland Tines

Equipped with Kverneland tines and a serrated blade, the Bale Knife is an all in one solution for bale handling. Use the tines to spear a bale, or scoop the bale onto the tines and hold it with the knife to safely move it across the yard.

Cuts cleanly.
