

RTX450

RIDE-ON TRACTOR

MANEUVERABILITY. A class-leading compact turning diameter allows the RTX450 to perform in narrow jobsites – especially in residential areas.

IN CONTROL. A common control system across the entire RTX lineup can help improve operator efficiency when operating Vermeer ride-on tractors.

THE PRODUCTIVITY DIFFERENCE. Experience a productivity difference due to a 14% increase in horsepower (as compared to the RT450), while the Tier 4 Final or Interim compliant engine allows you to meet local emissions requirements.

MEET YOUR JOBSITE STANDARDS. With a 26" (66 cm) tire standard-duty axle option, and the 29" (73.7 cm) tire and industry-exclusive quad track heavy-duty axle options, choose the configuration that works best for your jobsite requirements.

MAKE SENSE OF YOUR TRENCH. When difficult conditions are encountered while trenching causing a sudden drop in engine speed, the TrenchSense™ feature automatically pauses the forward motion of the tractor to prevent engine shutdown and recalibration of the machine controls. Once pre-set engine and trencher speed recovers, forward AutoCreep resumes. The sequence occurs within seconds and requires no operator adjustment.

GROUND DRIVE POWER. An electronically controlled hydraulic pump provides operators with more precise control and greater efficiency in comparison to machines with manually controlled pumps.
