Soft Hose Caddy

We would like to thank you for purchasing your new **Cadman Soft Hose Caddy**. You have purchased a product of superior quality that will serve your needs for a long time provided you follow this manual and safety procedures.

Figure 1 – 6010 Soft Hose Caddy

img-00427

<u>BEFORE</u> operating your Cadman Soft Hose Caddy, inspect the machine for any damage or parts which may have come loose during shipping. REPORT ANY DAMAGE TO CADMAN POWER EQUIPMENT LIMITED OR YOUR LOCAL DEALER IMMEDIATELY!

Page 3 of 46

Warranty Policy

CADMAN POWER EQUIPMENT LIMITED warrants that each machine it manufactures shall be free from defects in materials and workmanship. The terms of this warranty are as follows:

- All components manufactured by CADMAN POWER EQUIPMENT LIMITED shall be warranted for a period of one (1) year from the date of delivery, except the frame and hose drum structures which shall be warranted for a period of three (3) years.
- CADMAN POWER EQUIPMENT LIMITED makes no warranty whatsoever in regard to tires, engines, and other trade accessories used on its equipment. The customer shall rely solely on the warranties offered (if any) by the respective manufacturer of these trade accessories.

The sole obligation to **CADMAN POWER EQUIPMENT LIMITED** under this warranty is limited to the repair or replacement of any part it manufactured, which, in the judgment of **CADMAN POWER EQUIPMENT LIMITED**, failed under normal and proper use and maintenance due to defective materials or workmanship. All freight charges incurred shall be the sole responsibility of the customer.

CADMAN POWER EQUIPMENT LIMITED and its dealers (who are neither authorized nor qualified to undertake any obligations on behalf of CADMAN POWER EQUIPMENT LIMITED) DO NOT, under any circumstances, accept any responsibility for any losses or costs incurred due to parts failure and/or delays during the parts replacement process.

This warranty will be considered void if any alterations or modifications have been made to the machine without the express written consent of **CADMAN POWER EQUIPMENT LIMITED** outlining the nature and the extent of such modifications.

CADMAN POWER EQUIPMENT LIMITED, whose policy is one of continuous improvement, reserves the right to change specifications and designs without notice or incurring obligation.

The warranties expressed herein are non-transferable and replace any other warranties, either written or verbal, which may have been given or implied.

When Applying Liquid Manure

Environmental concerns seem to be driving legislative agendas in many agricultural areas across the continent. Current and pending laws in many agricultural regions of North America are changing the ways in which the agricultural community is expected to manage their liquid animal waste products.

The changes in legislation typically target two main issues; run-off prevention during and after application and soil nutrient loading.

Run-off seems to be the largest concern with nutrient application. Run-off may result from several different factors, most of which are controllable. These factors include; exceeding the soil intake rate; nutrient application on steep grades; high application amounts; leaking mainline fittings and seals; sudden rainfall during or immediately after application; ground frost; etc. Constant watch must be kept and immediate action taken when necessary to prevent run-off from occurring.

Soil nutrient loading depends on many variables. Some of these variables (but certainly not all) are soil type, type of crop being grown in the irrigated area, application timing, nutrient value of the material being applied (nutrient value should be assessed at the time of application as it can change throughout the year), etc.

Soil type will determine the intake rate at which liquid may be applied. Cultivation of the field just prior to application can improve the intake rate of some soils.

Great potential benefit lies in using the nutritional value of the manure being applied to replace some or all of the traditional chemical fertilizer used. Application timing and amount are important considerations. Soil analysis taken prior to planting and during the growth periods of the crop will help determine if there is room for further application amounts to be added prior to crop maturity. A total management plan should include provisions to end the crop season without surplus nutrients left as residual. These excess nutrients typically end up in the ground water supply. Local colleges, universities and agricultural extension services are usually a good source of information. They can usually help you determine an application program that prevents soil nutrient overload due to excess application.

Cadman Power Equipment Limited cannot possibly provide up-to-date recommendations with regard to the legal obligations you must deal with in your particular area. However, as a manufacturer of equipment used in nutrient application (liquid manure, milk house run-off, etc.), we feel it necessary to make you aware that the municipal, regional and state governing bodies in your area may have recently enacted new legislation or revised existing legislation with regard to nutrient handling practices and procedures.

It is your responsibility to make yourself aware of and abide by the current legislation in your area. Please take the time to contact your local agricultural representative to obtain the latest information regarding legal handling and application of manure.

Page 5 of 46

Safety Precautions

Please take the time to read and <u>understand</u> this manual so that unnecessary errors and risks are avoided. If you have any questions or concerns, please contact **Cadman Power Equipment Limited** or your local dealer/distributor.

- **DO NOT** move or operate this machine until you have read and understand these instructions in this manual.
- NEVER allow untrained persons to operate this machine.
- DO NOT attempt to service this machine while it is in operation.
- **MAKE CERTAIN** all mechanical and hydraulic tension has been released before attempting any service on the machine.
- CHECK all fasteners (nuts and bolts) regularly for tightness.
- PERFORM REQUIRED MAINTENANCE as prescribed or as necessary to keep this machine in safe operating condition.
- KEEP ALL SPECTATORS at a safe distance.
- **STAY CLEAR** of high pressure supply lines, especially when first pressurizing the system.
- **DO NOT** remove or alter any shielding on this machine.
- **BE CERTAIN** that the machine is securely anchored (using a tractor) before unwinding the hose.
- KEEP CLEAR of all moving parts.
- **NEVER** tow this machine at speeds greater than **10 mph** [**16 km/h**] and be certain the tow vehicle has adequate braking capacity to maintain safe control at all times.
- NEVER tow this machine with the hose loaded with fluid.
- **BE AWARE** of any obstacles (i.e. mail boxes, fence posts, and other equipment) that you may encounter when transporting the machine.
- REGULAR INSPECTION of your pipe/hose couplings, tubing and gaskets should be
 a part of your regular set-up routine. Any defective parts MUST be replaced or
 repaired before the machine is put into service.

This symbol, the <u>safety-alert symbol</u>, indicates a hazard. When you come across the safety-alert symbol in this manual, make certain you fully understand and abide by the given instructions or warnings.

OPERATOR NOTE

Safety is just a word until put into practice.

Safety must be the first thing on your mind when operating any piece of machinery.

Failure to follow all safety instructions can result in serious injury or death to you and/or any spectators.

Safety Decals

Cadman Power Equipment Limited has determined the potential hazards and has labeled the machine accordingly. The safety decals on this machine are intended to warn the operator of potential hazards.

Figure 2 - Signal Word Panels

img-00340

Each safety decal on this machine contains a Signal Word Panel which indicates the degree of hazard. Definitions of the Signal Words are as noted below...

- **DANGER** an imminently hazardous situation that, if not avoided, **WILL** result in death or serious injury.
- WARNING a potentially hazardous situation that, if not avoided, could result in death or serious injury, and include hazards that are exposed when guards are removed.
- CAUTION a potentially hazardous situation that, if not avoided, may result in minor or moderate injury.

It is important that these decals are properly maintained.

- keep all safety decals legible (remove dirt or debris)
- replace any damaged or illegible decals
- replace any missing decals
- if applicable, install the current safety decal specified by Cadman Power Equipment Limited on any components installed during repair

Figure 3 – Replace Decal

img-00131-A

Location of Safety Decals

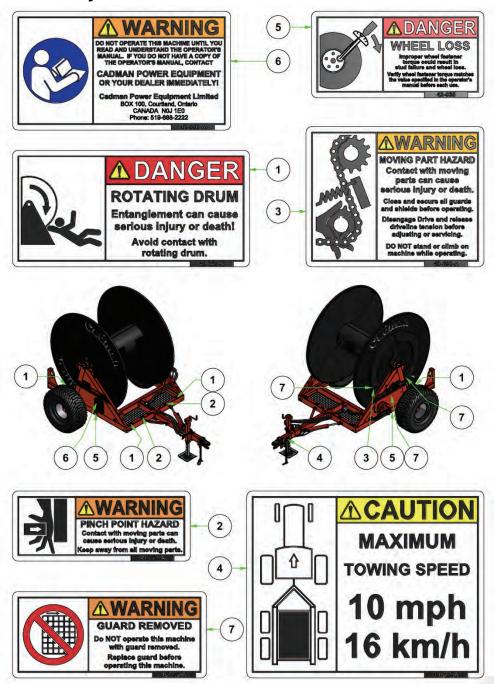

Figure 4 - Safety Label Location

img-00429

To obtain the required replacement safety decals contact **Cadman Power Equipment Limited or your Local Dealer**. Re-install all decals in the proper location on the machine. For part numbers please see page 30.

Page 8 of 46

Unloading Your Hose Caddy

Complete the following instructions to unload your Soft Hose Caddy...

Step 1

Connect the hydraulic motor hoses to the primary hydraulic port (*if available*). Connect the third hydraulic motor hose (Case Drain) from the hydraulic motor to a hydraulic motor return circuit (leak-off line port). Each tractor manufacturer may locate the hydraulic return circuit port in a different location based on each unique model. Review your tractors operator's manual or contact your tractor dealer for the location of this port. Connect the remaining cylinder hose pair.

It is important to ensure that the case drain hose is connected to a restriction free drain port on the tractor. This port MUST not exceed a working pressure of 100 psi [6.9 bar]. Connecting the case drain line to a pressurized port WILL result in motor and/or machine damage.

Step 2

Engage the drum brake and lock prior to moving your **Cadman Soft Hose Caddy**.

Figure 5 - Engage Drum Brake and Lock Prior to Transport

img-00430 & img-00433

It is important to verify that the drum brake and lock are engaged prior to moving your Cadman Soft Hose Caddy. Failure to do so can result in equipment damage.

Step 3

Ensure the tongue brace is in the locked position.

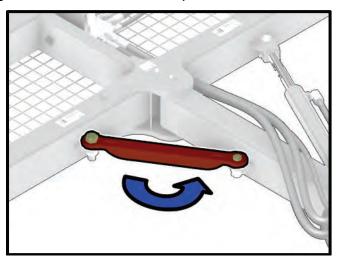

Figure 6 - Tongue Brace in Locked Position

img-00434

Step 4

Once at the required site, disengage the drum lock and release the drum brake. Leave enough brake tension to control drum freewheel.

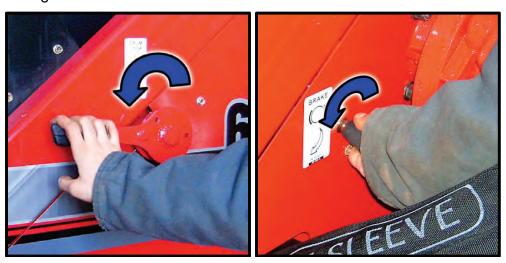

Figure 7 - Disengage Drum Lock and Release Brake

img-00431 & img-00432

Step 5

Engage the tractor hydraulics so the drum rotates away from the rear of the tractor. This will allow the soft hose to unreel. To put the drum into neutral (*free wheel*) shift the tractors hydraulic controls into the float position.

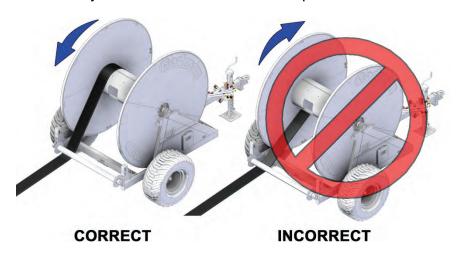

Figure 8 - Reel Direction

ima-00441

As you unreel soft hose, drive the tractor and hose caddy (at a low rate of speed) along the required hose path.

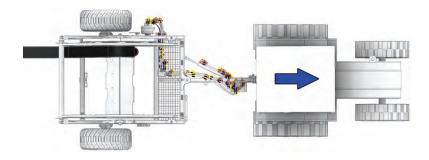

Figure 9 - Unreel Hose Slowly

img-00188-A

Step 7

When the soft hose is nearing the last wrap stop the tractor and disengage the hydraulics. Slowly rotate the drum so that the hose end fitting can be easily removed manually.

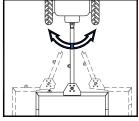

Failure to remove the hose end manually from the Soft Hose Caddy can result in hose, coupler or drum damage.

OPERATOR NOTE

Where field conditions permit, always attempt to pull the hose either up or down sloping terrain instead of operating across a side hill.

The Cadman Soft Hose Caddy allows the operator to offset the tracking of the unit. This allows the hose caddy to be towed to either side of center while unloading the hose. You MUST disengage the tongue brace prior to attempting offset tracking.

img-0018

When towing the hose caddy in the offset position be aware of obstacles in your path.

Temporary Hose Repair

In some cases your hose may become punctured during regular usage in the field. If this occurs complete the following steps to temporarily repair your hose.

Step 1

Stop pumping fluid through the hose. Wait until all line pressure has dissipated. Or use a pair of hose pinchers to isolate the damaged hose

A hose with a puncture may burst. Stay clear of a hose that is under pressure. Failure to stay clear may result in serious injury.

Step 2

Clean the area with water.

Step 3

Slide the temporary repair sleeve (equipped on every Cadman Supply Hose) to the damaged area of hose.

Figure 10 - Pull Repair Sleeve

imq-00444

Step 4

Pressurize the line.

Step 5

Once you have completed pumping, repair the hose using a hose mender. See page 38 for hose mending parts.

Page 12 of 46

Loading Your Hose Caddy

Prior to loading the Soft Hose Caddy, Cadman Power Equipment Limited requires that you clean the hoses with a proper clean-out procedure (i.e. clean-out ball launcher or water flushing). Failure to do so WILL result in gas build up in the hoses creating a great deal of pressure. This can cause equipment failure which could result in serious injury and/or death.

Complete the following instructions to load your Soft Hose Caddy...

Step 1

Position the Soft Hose Caddy relatively straight to the hose end. Disconnect a section of the soft hose by uncoupling the clamp.

Never pull more than two (2) empty hoses at one time. Extensive damage to your Hose Caddy WILL result.

Step 2 (if equipped)

Position the Soft Hose Caddy with the tractor so that one end of the soft hose can be looped under the roller (if equipped) and inserted into the opening in the hose drum.

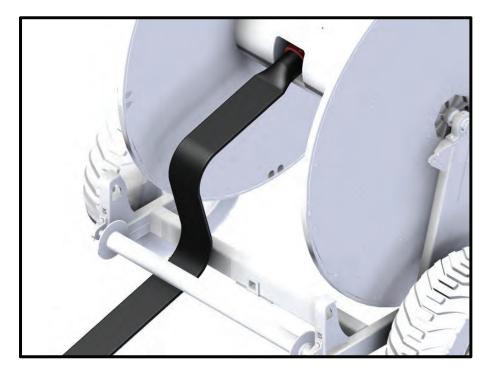

Figure 11 - Insert Hose into Reel Opening

img-00436

Step 3

With one end of the hose inserted into the drum, remove the tongue brace and engage the tractor hydraulics so that the drum rotates towards the tractor. The soft hose should always be reeled in on the topside of the drum.

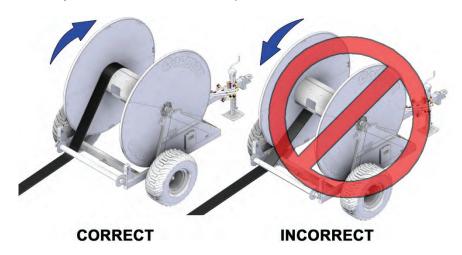

Figure 12 - Reel Direction

img-00446

Step 4

Guide the hose so that it is evenly distributed over the entire reel. Use the cylinder control to index the Soft Hose Caddy left and right to aid in the distribution of the hose.

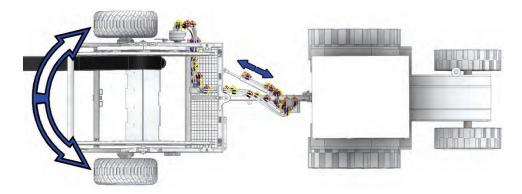

Figure 13 - Index Hose Caddy

img-00186-A

Do not index Soft Hose Caddy with rapid motion. Use small movements to adjust hose distribution. Keep spectators at a safe distance to prevent injury.

Step 5

When the first hose has been retrieved, return to Step 1 for the remaining hoses.

Required Maintenance

Prevention of mechanical failure is the goal of any good maintenance schedule. The secret to preventing unwanted down time is to adhere to a maintenance schedule suited to the way you use the equipment. Your maintenance schedule should include the following minimum requirements:

Maintenance must be done ONLY when the machine is shut down and is in a non-loaded condition. This means that all mechanical and hydraulic tension has been released from the hose rewind system.

Each Use

| Maintenance Item | Figure | Procedure |
|---|------------------------------------|---|
| Visually inspect equipment | | Walk around the unit and inspect for loose, missing or damaged items. Check the condition of tongue pivot pin, chain and connecting links. Replace missing or damaged items and tighten loosened items. |
| Maintain the tire pressure at Standard 44x18x20 Tire 36-40 psi [248-276 kPa] Heavy Duty Option 385/65R22.5 85 psi [590 kPa] | (÷•¢ | Using a tire pressure gauge, check the pressure of each tire and add or remove air to achieve the desired pressure. DO NOT LOWER TIRE PRESSURE BELOW THE RECOMMENDED LEVEL. A lower pressure than the recommended pressure will result in the tire separating from the rim. |
| | | DO NOT OVER INFLATE TIRE. Pressure higher than recommended will result in wheel failure which could result in serious injury and/or death. |
| Tighten all wheel bolts | 8 1 6 4 3 6 2 7 img-00132 | Before moving the unit, verify that the wheel bolts are tight. When tightening the lug nuts use the star pattern with your torque wrench set at 150 ft/lbs [203 N.m]. |
| Adjust, if necessary, the alignment and tension of the drive chains | Figure 14 | The drive chain (around the drum) is properly tensioned when it has no visible slack and is setting properly onto the drive sprocket when the drum rotates. Adjustments are made by turning the locknut (3/4" wrench) on the spring adjustment rod. |
| Lubricate all grease fittings | Figure 15 | Using a grease gun, lubricate each grease fitting with an appropriate amount of acceptable grease. (See Lubricants) |

Page 42 of 46

Before Storing

Prior to storing the Soft Hose Caddy, Cadman Power Equipment Limited requires that you clean the hoses with a proper clean-out procedure (i.e. clean-out ball launcher or water flushing). Failure to do so WILL result in gas build up in the hoses creating a great deal of pressure. This can cause equipment failure which could result in serious injury and/or death.

| Maintenance Item | Figure | Procedure |
|---|-----------|--|
| Drain and clean out the hose. | N / A | Use a clean-out ball (sold separately) following the instructions provided with the unit. OR |
| | | Flush with water (minimum of 2000 gallons [7600 liters]) to completely purge the hose. |
| Clean, inspect and repack the main chassis wheel bearing. | N/A | See Spindle Assembly on page 20. Replace the seals as required |
| Lubricate all grease points. | Figure 15 | Using a grease gun, lubricate each grease fitting with an appropriate amount of acceptable grease. (See Lubricants) |
| Lubricate all chains | N/A | Brush each chain with acceptable grease. (see "Lubricants") |

Table 2 – Required Maintenance - Before Storing

Before Start Up (After long term storage)

| Maintenance Item | Figure | Procedure |
|-------------------------------|---------|--|
| Review Operator's manual | | Review this manual to refresh your memory regarding the proper operation of this machine. This will reduce the potential for equipment damage and user injury. |
| Complete each use maintenance | Table 1 | Complete all the maintenance procedures as prescribed in the Each Use maintenance table. |

Table 3 - Required Maintenance - After Long Term Storage

Lubricants

Grease: Any good grade multi-purpose, waterproof grease is compatible

with the greasing requirements of your Cadman Soft Hose

Caddy.

Technical Specifications

Approximate Soft Hose Caddy Dimensions

IMPORTANT: The dimensions shown on the following pages are only approximate. Many varying factors affect these dimensions, for example tire option, hose type, tire inflation etc.

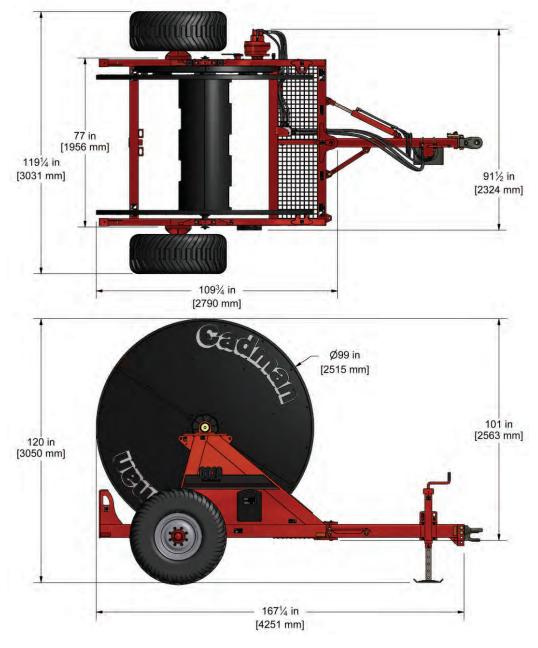

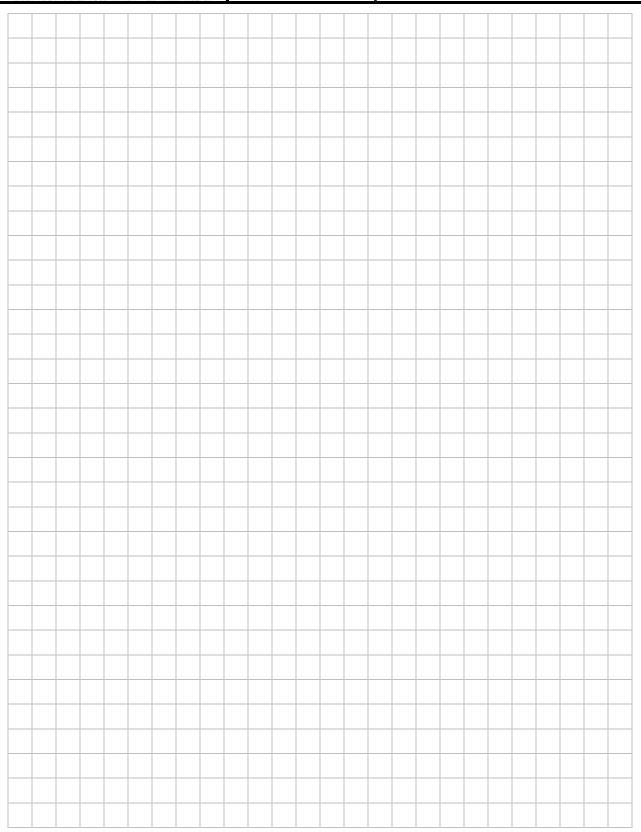

Figure 16 - Overall Dimensions

img-00428

The approximate weight for an empty Cadman 6010 Hose Caddy is 4211 lbs [1910 kg].
